Version #2

Introduction

Systematic data breach management seeks to ensure that incidents that compromise privacy, information security, or the organization's business are detected, assessed, and addressed in a consistent manner. There are also many requirements for detecting and reporting personal data breaches e.g. in the GDPR.

The organization shall be able to demonstrate through documentation that the established process for identifying, assessing and treating breaches is working as planned.

Breakdown of data breaches by type, cause and impact

Data breaches are events that result in the destruction, loss, alteration, unauthorized disclosure, or unauthorized access to personal data. *Security incidents* may also include, more broadly, incidents where security or business is compromised but there's no relation to personal data.

Below is a summary of how the breaches documented in the management system are broken down by type of breach.

No data

Below is a summary of how the data breaches documented in the management system are distributed in terms of the underlying cause of the breach.

No data

Below is a summary of the distribution of personal data breaches documented in the management system in terms of impact on data subjects.

No data

Results of assessment and treatment of breaches

Once a data security breach has been detected, its seriousness is assessed and the breach is dealt with by deciding on the measures it requires.

- by specifying the personal data that was the subject of the violation and the groups of data subjects
- by evaluating the possible ways of impact of the violation and the severity of the effects **from the point of view of the data subject**

Violations processed by:

- deciding on the necessary notifications and making them
- determining the tasks added to the management system due to the violation
- determining other measures taken due to the violation

Below are examples of breaches that have been treated in the management system.

Owner		Title	Status	
KK	kbb@dataandmore.com	Data system downtime	Closed	Show details
	kbb@dataandmore.com	Employee's access to restricted data	Closed	Show details
	kbb@dataandmore.com	Hacking	Closed	Show details
	kbb@dataandmore.com	Malware infection	Closed	Show details
	kbb@dataandmore.com	Sending confidential information to the wrong recipient	Closed	Show details

Below are examples of recent breaches that have not yet been treated in the management system.
